Using generative AI

- You are not forbidden to use generative AI, but please use it responsibly.
- HKU access for GenAIs: https://genai.hku.hk/

- Understand the limitations of generative AI:
  - It is not always accurate.
  - Its performance may not be consistent over time.
  - It is not very good at specific and advanced knowledge.
  - It sometimes gives fake information and arguments which look believable.

Using generative AI

- Important: Use AI as a helper for your study, NOT the one to do your work!
- Good practice:
  - Write your own draft and ask it to check your grammar and fluency.
  - Ask it for suggestions on topics.
  - Help you summarise a source article *for a quick preview*.
  - Always double-check AI-generated information (e.g., search on Google); *think twice* before using the information—you will take responsibility, not AI.

- Bad practice:
  - Ask it to write an entire paragraph starting with a few keywords.
  - Ask it to rephrase your points into a big paragraph.
  - Ask it to give you a reference list without checking.
    The references from AI are often incorrect/fake. Make sure you read and understand the references before use.
